- Designed and implemented an automation testing framework using Selenium WebDriver with POM, achieving 90 percent test case automation coverage; created and executed test scripts using TestNG, analyzed execution results to identify and report 95 percent of critical bugs effectively.

Projects

Bank Loan Analysis

- This project analyzes bank loan data to optimize loan approval processes, assess risks, and improve decision-making. It covers loan reviews, credit checks, income verification, and risk assessments. By identifying factors influencing approval and predicting default risks, it aids in enhancing lending strategies, fraud detection, and portfolio management.

Sales Analysis |

- Developed an end-to-end sales analysis solution using SQL and Power BI. Extracted, cleaned, and transformed sales data to uncover trends and insights. Built interactive dashboards to visualize key metrics like sales performance, customer segmentation, and revenue growth, enabling data-driven decision-making.
